

Social Impact Entrepreneurship

UGRA_015147

Departments	Department of Strategy & General Management
Teaching Languages	English
ECTS	4
Teacher responsible	Jaume Iglesies Pie - jaume.iglesies@esade.edu

Course Goals

The main goal of this course is to introduce and explore how social entrepreneurship can help find, implement and scale solutions to the significant social challenges facing our society. And how impact investing can fund and support such solutions. The course aims to foster a positive attitude and affinity toward the possibility of becoming personally involved in a social enterprise or impact investing initiative in the future. We also explore how to generate social impact in any career path by applying the principles and practices acquired in the course.

Hence participants will acquire the basic knowledge necessary to build and lead high-performing initiatives which help generate economic and social values simultaneously and are economically viable in the long term.

The course also places a strong focus on methodologies and skills. We will practice creativity and innovation skills, analytical skills, negotiation skills, group work, presentations... and become acquainted with the main innovation and start-up methodologies of the time. We will also sharpen our critical thinking ability and strive to develop our own opinions about controversial issues and question our assumptions. Hence this course is exciting and suitable for students who want to explore entrepreneurship or simply an alternative view to business and economics.

The course strives to be eminently practical and applicable to a variety of contexts. For this reason, students will analyze cases referring to different types of social enterprises in other sectors and continents, addressing varied challenges in various ways, and displaying the main challenges faced by social entrepreneurs in different development phases.

Previous knowledge

Basic knowledge in marketing, human resources, finance, operations and strategy.

Description

Short description

It is widely accepted that contemporary democratic societies are built around three sectors: public administrations, business companies, and nonprofit organizations. Like a three-legged stool, these three sectors must work together to drive societies towards a state of equilibrium. However, specific organizations seem to blur the limits between these sectors: social enterprises. In an ever-changing, fast-paced environment, social enterprise organizations (for-profit and nonprofit) need the appropriate skills to face new challenges and continue to help improve the lives of people and communities. In other words, these organizations must be truly capable of leading the complex world of social intervention. The new demands placed upon social enterprises are the results of deep-rooted changes that are shaping contemporary societies.

Though social entrepreneurship has gained popularity and is now being taught in many universities, it is still a very young field intellectually. The theory is in very elementary stages of development, and empirical research has been severely limited. The concept is inherently appealing to many, but we do not have the kinds of intellectual frameworks that would help social entrepreneurs, funders, and policymakers make wise decisions about using it to the most significant benefit. This requires looking at the limits and weaknesses of popular approaches to social entrepreneurship with the same intensity as we trumpet their strengths.

The course is designed for a broad range of participants, including those who, during their professional careers, are considering a leadership position in a social enterprise; interested in understanding the specifics of managing social enterprises; interested in consulting to social enterprises; planning to serve as board members or volunteers; become funders of nonprofit organizations, or interested in leveraging business to help social transformation. "Social" is understood here in the broadest sense of benefitting society, including environmental improvements.
